Stable diazo compounds and their application to  
inks and dyes. *Ind. U.S.S.R.*, 1937, No. 109.  
Rapogen colors for printing should  
be mixed 12 hr. before use. The following general formula  
is recommended: glycerin, castor oil 20; Triton  
40; NaOH 30%; H<sub>2</sub>O at 30-35%; starch-tragant  
40; NaOH 30%; H<sub>2</sub>O 80%. This gives good results  
when thickened cold. B.C.A.

3712. Determination of vat dyes on the fibre.  
I. M. Golomb. Kuban'sk. Section. K. E. Voroshilov Sci. Res. Inst. of Organic Intermediates and Dyes(19). Zav. Prom. Akad., 1957, 36 (2), 339-342. The relative effects of various organic solvents, glycerol, ethanediol, triethanolamine, 2-ethoxyethanol and triethylene glycol, present in a soln. also containing NaOH and distilonite on the removal of vat dyes from printed calico are studied. Triethylene glycol is as effective as 2-ethoxyethanol which is normally used for the purpose, and the soln. of the leuco dyes are stable and easily analysed colorimetrically. Polycyclic ketone dyes are easily removed from fibres in the cold, but thioindigo dyes require heat. G. S. Smith

AUTHOR: V. I. Gerasimov

TITLE:

"Scientific-Technical Conference on the Problems of Scientific-Technical Cooperation in the Production of Synthetic Dyes"

PUBLICATION: Proceedings of the Scientific-Technical Conference on the Production of Synthetic Dyes ("Vestnik")

ABSTRACT:

In May 1959 a scientific-technical conference on problems of scientific-technical cooperation with the application of synthetic dyes was held at the All-Union Chemical Combine. The conference was organized by V. I. Gerasimov and persons of the All-Union Council of the Union of Scientific Workers available from the Institute of Synthetic Dyes. The following papers were presented: T. V. Kostyleva, "Assortment of Dyes for Acetate Yarn"; N. A. Slobodova, "Synthetic Dyes for Their Improvement"; V. I. Gerasimov (MFTIM), "Tasks of the Chemical Combine for Enhancing the Assortment of Resistant Dyes and Improving the Technology of Their Production"; Ye. V. Chutrova (TsNIKhB), "Inefficiency Assessment and Utility of Vat Dyes"; L. M. Golman (GUPKIM), "Standardization of Vat and Other Dyes for Acetate Yarn"; N. P. Tsvetkov (Fizkor): "The Use of Synthetic Dyes in the Production of Synthetic Fibers"; V. I. Gerasimov (MFTIM), "The Use of Synthetic Dyes in the Production of Synthetic Fibers"; V. I. Gerasimov (MFTIM), "Material Basis for the Production of Synthetic Dyes".

CONT'D.

Scientific and Technical Conference Application Form

Topic: "Practical Use of the Results of Scientific Research in the Field of Fur." Report on the Conference "Scientific Work on the Preparation and Processing of Fur Products" organized by the Central Research Institute for Performing the Technological of Fur Products (C.R.I.P.P.) of the Ministry of Light Industry of the USSR.

The conference was organized by V. N. Tikhonov, Director of the All-Union Scientific and Technical Institute of the National Wool Textile Institute, V. I. Krasnoshchekov, Head of the Institute of Wool and Textile Fibers in a Wool Mill; N. V. Klement'yanova-Chernova, Head of Technical Institute "V. I. Klement'yanova-Chernova" in a Wool Mill; N. V. Tikhonova, Head of the Institute of Wool and Textile Fibers by Thioindigo Dyes; L. I. Belova, Head of the Institute of the Fur Industry; "The Application of New Types of Fur"; P. Iakunovitshev, Head of the Central Scientific Research Institute of Silk; "Work on Natural Silk by Iakunovitshev and Vat. I. I. S.;" V. V. Maryanov, Head of the Chemical-Technical Institute "Physical, Technical Properties and Applications of Aromatic Amines and Their Interaction with Cellulosic Fibers." The conference was conducted in English.

Translation from: Referativnyy zhurnal. Elektrotehnika. 1959, Nr 1, p 111 [USSR]

AUTHOR: Gelomidov, I. N.

TITLE: Investigation of a Continuous Automatic-Control System That Comprises a Single-Stage, Multi-Winding Compensated Direct-Axis Rotating Amplifier

PERIODICAL: Izv. vyssh. uchebn. zavedeniy. Gornyy zh., 1958, Nr 1, pp 115-129

ABSTRACT: Results are presented of theoretical and experimental investigations of a laboratory model of the electric drive of an EVG-6 (8) dredge turning mechanism; the drive is of the "generator-motor" type, and is excited by a 3-winding compensated rotating amplifier. To ensure high-speed operation and a steep mechanical characteristic of the main motor, negative current feedbacks and a voltage cutoff on the generator are used. The amplifier is actually a conventional DC machine with a compensating winding distributed in the slots of its pole pieces and with saturable poles. The poles also carry a control winding, current and voltage feedback windings, and an AC demagnetizing winding. Insofar as the system has a voltage cutoff, the starting

Investigation of a Continuous Automatic-Control System That Comprises a . . . .

process is considered as consisting of two stages. During the first stage, the voltage feedback is inactive and a forced acceleration of the motor takes place. Differential equations describing system behavior during both stages are set up; structural diagrams are presented. The resulting equation of the main-motor speed is of the third order. The system is checked for stability according to the Routh-Hurwitz criterion. Formulae are offered for constructing the curves of current, motor rpm, and generator voltage during acceleration. The experimental investigations were conducted on a laboratory model. Design results showed good agreement with experimental results. System simplicity and reliability of the rotating-amplifier-controlled drive are noted. A larger size and lower gain as compared to the amplidyne, as well as the need for correcting circuits to reduce initial current peaks in the main circuit are noted as disadvantages.

TITLE: The Selection of Variants of Chamber Systems of Mining with Breaking of the Ore by Deep Blast Holes (Vyborki variantov kamernykh sistem razrabotki s otsibivayushchimi skvazhinami)

PERIODICAL: Gornyy zhurnal, 1968, br 12, pp 19 - 22 (USSR)

ABSTRACT: Different variants of chamber-level or sublevel drift systems could be adapted in mines of the same mining and geological conditions. At present the system of sublevel drifts or cross-drifts with ore blasting by fan-like series of blast holes from single or twin sublevel drifts, is most widely used abroad and in the Soviet Union. The authors built a table (table 1) in which technical and economic indicators for different variants of chamber-level and sublevel drift systems were given according to Soviet and foreign data. Special experiments made with all these variants in a Soviet mine showed the expediency of the system of sublevel drifts or cross drifts with ore blasting by fan-like series of blast holes, either from a single or

Card 1/3

The Selection of Variants of Chamber Systems of Mining "With Breaking of  
the Ore by Deep Blast Holes

twin sublevel drifts. The single sublevel drifts or cross drifts were used when the ore deposits were not important by their thickness and commercial value, and the chambers were small. The twin sublevel drifts were mainly used when the ore layers were of a larger magnitude and the chambers were wider. The level chamber system was used for the mining of isolated resistant ore-bodies, or on the sides of the deposit where the strength of the pillars was not so important. There are 2 tables and 2 graphs.

Construction of underground structures (Stroitel'stvo podzemnykh oboruzhenii)  
Moscow. Izd-vo "Nedra", 1966. 293 p. illus., bibliog. 2450 copies printed.

TOPIC TAGS: construction, mining engineering

PURPOSE AND COVERAGE: This book is intended for engineering and technical workers  
of construction, scientific-research, and design organizations studying the  
problems of building underground installations; it can also be used by workers  
of mine-construction organizations. In the book are discussed the basic prob-  
lems of conducting mining operations during the construction of underground in-  
stallations. There are 97 references, 72 of which are Soviet.

P.M. Kachina.

PURPOSE: This book is intended for coal and ore mining engineers.

COVERAGE: The collection of articles reports on the results of scientific studies conducted by members of the Institute of Mining Industries of the All Union on Problems of Developing and Exploiting coal and ore deposits. The book is divided into two parts. Part I discusses the development and exploitation of coal deposits, the trends in developing underground and surface exploitation methods, the scientific bases and principles applied in selecting exploitation methods for different types of coal deposits. The determination of the basic elements in the use of machinery, the determination of the basic elements in the use of machinery, the selection of equipment and exploitation of coal and coal reserves. Part II is devoted to problems in open-pit and underground exploitation of one deposit. The book contains a detailed description of the characteristics and mining methods used in underground exploitation of deposits in the area of the Kursk Magnetic Anomaly. The open-pit mining method used in exploiting the rich KPA ore is the determining factor in one of the further ore dressing. The book is directed at coal miners, coal miners, mining engineers, mining technicians, etc. It is accompanied by diagrams, tables and bibliographical references.
